Hydrobiologia

The International Journal on Limnology and Marine Sciences

Volume 480, 15 July 2002

Special Issue
Progress in Zooplankton Biology:
Ecology, Systematics, and Behavior

Guest Editors
C.E. Lee, S. Strom & J. Yen

PART I: A TRIBUTE TO PROFESSOR BRUCE W. FROST

List of primary contributors 1–2

Preface
Carol Eunmi Lee 3–4

Bruce W. Frost – an appreciation
Karl Banse 5–9

Publications of Bruce W. Frost
Karl Banse 11–14

PART II: ZOOPLANKTON ECOLOGY

Steemann Nielsen and the zooplankton
Karl Banse 15–28

Integrating classical and microbial food web concepts: evolving views from the open-ocean tropical Pacific
Michael R. Landry 29–39

Novel interactions between phytoplankton and microzooplankton: their influence on the coupling between growth and grazing rates in the sea
Suzanne Strom 41–54

On birth and death in the sea
Mark D. Ohman, Jeffrey A. Runge, Edward G. Durbin, David B. Field, Barbara Niehoff 55–68

A chronology of plankton dynamics *in silico*: how computer models have been used to study marine ecosystems
Wendy Gentleman 69–85

Zooplankton invasions: a brief review, plus two case studies from the northeast Pacific Ocean
Stephen M. Bollens, Jeffery R. Cordell, Sean Avent, Rian Hooff 87–110

PART III: ZOOPLANKTON SYSTEMATICS AND EVOLUTION

Morphological stasis in the *Eurytemora affinis* species complex (Copepoda: Temoridae)
Carol Eunmi Lee, Bruce W. Frost 111–128

A variant form of *Megacalanus longicornis* (Copepoda: Megacalanidae) from deep waters off Southern California
Charles B. Miller 129–143

***Oncaea frosti*, a new species (Copepoda: Poecilostomatoida) from the Liberian coast and the Gulf of Mexico**
Gayle A. Heron 145–154

PART IV: ZOOPLANKTON BEHAVIOR

Zooplankton swarms: characteristics, proximal cues and proposed advantages
Julie W. Ambler 155–164

Particle and prey detection by mechanoreceptive copepods: a mathematical analysis
Jeannette Yen, Akira Okubo 165–173

Predicting availability to consumers of spatially and temporally variable resources
Daniel Grünbaum 175–191

Does *Acartia clausi* (Copepoda: Calanoida) use an area-restricted search foraging strategy to find food?
Andrew W. Leising, Peter J.S. Franks 193–207
